ad Morphological Change in Quaternary Mammals of North America:

This book examines case studies of North American Quaternary mammalian evolution within the larger domain of modern evolutionary theory. It presents previously unpublished studies of a variety of taxa: xenarthrans, rodents, carnivores, ungulates, examined over several temporal scales from a few thousand years during the Holocene to millions of years of late Pliocene and Pleistocene time. Different organizational levels are represented from mosaic population variation demonstrates the contribution that studies of Quaternary mammals can make to general evolutionary theory. Several of the contributions will provoke argument and all will stimulate discussion and further work. Ernest L. Lundelius Jr. Science
