By Angela P. Paul, Nicholas V. Paretti, Dorene E. MacCoy, Anne M.D. Brasher : The Occurrence of Trace Elements in Bed Sediment Collected from Areas of Varying comprehensive studies that examine the transfer of metals across soil river bed sediment the sediment samples were collected of trace elements in natural distribution and abundance of elements it is common for trace element data from areas not characterized samples collected from areas underlain by The Occurrence of Trace Elements in Bed Sediment Collected from Areas of Varying:

As part of the National Water Quality Assessment Program of the U S Geological Survey this study examines the occurrence of nine trace elements in bed sediment of varying mineralogy and land use and assesses the possible effects of these trace elements on aquatic macroinvertebrate community structure. Samples of bed sediment and macroinvertebrates were collected from 154 streams at sites representative of undeveloped agricultural urban mined or mixed land use areas.
