By Food and Agriculture Organization of the United Nations : Marine Mammals of the World (FAO Species Identification Field Guides) find helpful customer reviews and review ratings for marine mammals of the world fao species identification field guides at fao species identification guide marine mammals of the world by thomas a jefferson stephen leatherwood marine mammal research program iucnssc cetacean Marine Mammals of the World (FAO Species Identification Field Guides):

1 of 1 review helpful Not the same book By Katie This seems like a very interesting and informative book Except I purchased this thinking that it was actually a spiral bound version of Marine Mammals of the World A Comprehensive Guide to Their Identification as that is what the look inside window showed I need that version for a class and this book is very different I am a little upset that this was even listed with Identification guide to marine mammals and to cetaceans seals and sirenians found in fresh water An excellent addition to the library of any wildlife disease professional providing all the current information on basic species identification needed to identify and have a basic understanding of a marine mammal observed at sea or on the necropsy table
